Diesel fuel injector as installed in a MAN V8 Diesel engine. Common rail direct fuel injection is a direct fuel injection system built around a high-pressure (over 2,000 bar or 200 MPa or 29,000 psi) fuel rail feeding solenoid valves, as opposed to a low-pressure fuel pump feeding unit injectors (or pump nozzles). In the common rail type injection system, diesel has the following route. It comes from the tank at very low pressure (normal, somewhere at 1-2 bar) and enters the diesel filter to be purified. From there it comes out with slightly higher pressure (around 4-5 bar) and reaches through high-pressure hoses at the high pump.
