This is a collection of 13 papers by a leading proponent of new classical macroeconomics, published between 1981 and 1989. The papers are classified into three topical groups. The five papers in the first section, "Rules versus Discretion," provide an overview of the models and ideas that have been deployed in this policy debate. The next three papers investigate the impact of changes in the money supply on business cycles. The third category contains five papers that address various issues in fiscal policy. Of particular note is Barro's 1989 paper on the resuscitation of the Ricardian equivalence theorem. ISBN 0-674-54080-8: \$37.50.

This graduate level text on economic growth surveys neoclassical and more recent growth theories, stressing their empirical implications and the relation of theory to data and evidence. The authors have undertaken a major revision for the long-awaited second edition of this widely used text, the first modern textbook devoted to growth theory. The book has been expanded in many areas and incorporates the latest research. After an introductory discussion of economic growth, the book examines neoclassical growth theories, from Solow-Swan in the 1950s and Cass-Koopmans in the 1960s to more recent refinements; this is followed by a discussion of extensions to the model, with expanded treatment in this edition of heterogeneity of households. The book then turns to endogenous growth theory, discussing, among other topics, models of endogenous technological progress (with an expanded discussion in this edition of the role of outside competition in the growth process), technological diffusion, and an endogenous determination of labor supply and population. The authors then explain the essentials of growth accounting and apply this framework to endogenous growth models. The final chapters cover empirical analysis of regions and empirical evidence on economic growth for a broad panel of countries from 1960 to 2000. The updated treatment of cross-country growth regressions for this edition uses the new Summers-Heston data set on world income distribution compiled through 2000.

This brand new EMEA edition of Robert Barro's popular text brings an EMEA perspective whilst also being fully updated to reflect the macroeconomics of a post-financial crisis world. Starting with long-run macroeconomics, this text explores some of the key theories and models in macroeconomics such as the Keynesian model and the business-cycle model, finishing with extending the equilibrium model to the open economy. This exciting new edition provides an accurate and unified presentation of current macroeconomic thought whilst maintaining Professor Barro's original vision for his textbook.This edition also comes with the optional extra of Aplia, a comprehensive online learning assessment tool with auto-graded randomised questions to test students' understanding.

Immediately engage today's reader with MACRO, a unique modern presentation of macroeconomics that makes it easy to emphasize a solid microfoundations and real-business cycle approach in a presentation unlike any other intermediate macroeconomics text. Student engineered and faculty approved, Robert Barro's MACRO demonstrates an extraordinary command of growth, equilibrium, and business cycle theory with a focus on microfoundations. Robert Barro's Macroeconomics has become the classic textbook presentation of the equilibrium approach to macroeconomics. In its first four editions, this book has shown undergraduates how market-clearing models with strong microeconomic foundations can be used to understand real-world phenomena and to evaluate alternative macroeconomic policies. Moreover, a single, unified framework works as well for short-term business fluctuation as for long-term economic growth. This latest edition includes the most recent theoretical and empirical developments in economic growth, recent evidence on the macroeconomics of labor markets and public finance, and up-to-date results on the interplay between nominal and real variables.
