Instruction in play skills is noted in the literature as important for young children with autism, yet little evidence suggests which of several teaching methods is most effective.

Learning occurs in the context of play for young children. Previous research has shown that many young children lack developmentally appropriate play skills. Play interventions have been developed to assist those children who may be lacking play skills. However, there is little research on direct play skill interventions for children who exhibit challenging behaviors. This study examined the effects of a four-week play skill intervention for six children with behavioral needs who attend a mental health day-treatment facility. Three children were in the play skill intervention group and three children in the comparison group. The intervention occurred twice a week for four weeks and followed a "Plan, Play, and

One hundred and ten years ago, Maria Montessori, the first female physician in Italy, devised a very different method of educating children, based on her observations of how they naturally learn. In Montessori, Angeline Stoll Lillard shows that science has finally caught up with Maria Montessori. Lillard presents the research behind nine insights that are foundations of Montessori education, describing how each of these insights is applied in the Montessori classroom. In reading this book, parents and teachers alike will develop a clear understanding of what happens in a Montessori classroom and, more importantly, why it happens and why it works. Lillard explains the scientific basis for Montessori's system and the distinctions between practices in traditional, "Montessomething," and authentic Montessori education. Furthermore, in this new edition, she presents recent studies showing evidence that this alternative to traditional schooling

This book introduces social skills programs to parents of preschool- and kindergarten-aged children diagnosed with one of the Pervasive Developmental Disorders (PDD), including Autistic Disorder, Asperger's Disorder, and PDD: Not Otherwise Specified. The book is based on the authors' decades of clinical experience using Applied Behavior Analysis (ABA), a proven educational method, to teach social skills at home and school. This book focuses on four broad topics: play skills; the language of social skills; understanding another person's perspective; functioning in an inclusive classroom. This book helps parents to work with their child's strengths to improve social skills. Following the suggestions and exercises in this book, parents can teach children to: pretend-play, use toys appropriately, know when to use conventional responses like -- excuse me -- tell jokes, recognise that others' feelings and thoughts are different from their own, and initiate social
