With the fundamental assumptions of neorealism and social constructivism covered, this paper will proceed to evaluate how they explain three important dynamics of the Cold War- namely bipolarity, alliance behaviors of states and the end of the Cold War. Bipolarity during the Cold War. The literature is dominated with the characterization of the Cold War as being bipolar based upon the neorealist idea of the distribution of power (Wagner, 1993, pp. 77-98).

Since the collapse of the Soviet Union, the international system has been unipolar, centered on the United States. But the rise of China foreshadows a change in the distribution of power. Øystein Tunsjø shows that the international system is moving toward a U.S.-China standoff, bringing us back to bipolarity—a system in which no third power can challenge the top two. *The Return of Bipolarity in World Politics* surveys the new era of superpowers to argue that the combined effects of the narrowing power gap between China and the United States and the widening power gap between China and any third-ranking power portend a new bipolar system that will differ in crucial ways from that of the last century. Tunsjø expands Kenneth N. Waltz's structural-realist theory to examine the new bipolarity within the context of geopolitics, which he calls "geostructural realism." He considers how a new bipolar system will

affect balancing and stability in U.S.-China relations, predicting that the new bipolarity will not be as prone to arms races as the previous era's; that the risk of limited war between the two superpowers is likely to be higher in the coming bipolarity, especially since the two powers are primarily rivals at sea rather than on land; and that the superpowers are likely to be preoccupied with rivalry and conflict in East Asia instead of globally. Tunsjø presents a major challenge to how international relations understands superpowers in the twenty-first century.

This book is aimed at presenting fresh views, interpretations, and reinterpretations of some already researched issues relating to the Yugoslav foreign policy and international relations up to year 1991. Yugoslavia positioned itself as a communist state that was not under the heel of the Soviet diplomacy and policy and as such was perceived by the West as an acceptable partner and useful tool in counteracting the Soviet influence.

A multilevel theory of international relations that accounts for intended and unintended outcomes of cooperation and conflict

In 1989 and 1990 the map of Europe was transformed peacefully, without the wars which caused the other great ruptures of the international order in 1815, 1870, 1918, and 1945. What role did international summitry play in the denouement of the Cold War? Scholars have tended to focus on long-term systemic factors, Gorbachev's reform agenda, or the impact in 1989 of 'people power'. This major multinational study, based on archives from both sides of the 'Iron Curtain', adopts a novel perspective by exploring the contribution of international statecraft to the dissolution of Europe's bipolar order. This is done through the examination of key summit meetings from 1970 to 1990 across three phases - 'Thawing

the Cold War', 'Living with the Cold War', and 'Transcending the Cold War' - and in three main strands: the superpowers and arms control, their triangular relationship with China, and the German question. The threads are drawn together in a sweeping analytical conclusion. Transcending the Cold War includes fascinating insights into key statesman such as Richard Nixon and Ronald Reagan, Leonid Brezhnev and Mikhail Gorbachev, Willy Brandt and Helmut Kohl, Zhou Enlai and Deng Xiaoping - both as thinkers about the international system and also practitioners of summit bargaining. Particular attention is devoted to the cultural dimension of summitry, as performative acts for the media and as engagement with 'the Other' across ideological divides. Written in lively prose, this volume is essential reading for those interested in modern history, contemporary politics, and international relations -

addressing issues that still shape the world today.

Since the disintegration of the Soviet Union and the end of the Cold War, the previously well-established organisation of world politics has been thrown into disarray. While during the Cold War, the bipolarity of the world gave other powers a defined structure within which to vie for power, influence and material wealth, the current global political landscape has been transformed by a diffusion of power. As a result, the world has seen the rise of sub-national or quasi-/non-state actors, such as Hezbollah, al-Qaeda and the movement that calls itself Islamic State, or ISIS. These dramatic geopolitical shifts have heavily impacted state-society relationships,

power and authority in the international system. *Weak States, Strong Societies* analyses the effect of these developments on the new world order, arguing that the framework of 'weak state, strong society' appears even more applicable to the contemporary global landscape than it did during the Cold War. Focusing on a range of regional contexts, the book explores what constitutes a weak or strong state. It will be essential reading for specialists in politics and international relations, whether students or academic researchers.

Current debates about the nature of international politics have centered on the clash between supporters and critics of realism. *The Perils of Anarchy* brings together a number of recent essays written in the realist tradition. It includes realist interpretations of the collapse of the Cold War order and of the emerging order that has

The Third World Beyond the Cold War presents an overview of the changes brought about in Third World countries since the end of the cold war. The book does so in two ways: by highlighting major areas of change in the Third World, and using regional case-studies as a means of isolating changes specific to certain regions. The themes chosen by the editors—economics, politics, security—are not, of course, exhaustive, but are broadly interpreted so as to encompass the major areas of change among Third World countries. The regional case-studies—Asia-Pacific, Latin America, South Asia, Africa, the Middle East—were selected to bring out both the themes and the diversity of experience. The essays, written by leading scholars in the field of International Relations, caters for a variety of constituencies: those who seek the 'big picture' in understanding the Third World in International Relations, those who look for general
